PETITION TO STOP THE BADGER SLAUGHTER

We, the undersigned, believe that badgers are being unfairly scapegoated by the farming industry for spreading TB in cattle. The UK Government's own 10 year study found that "*Badger culling cannot meaningfully contribute to the control of cattle TB."* Intensive farming is to blame for the spread of TB in cattle; the majority of dairy cows are kept for much of the year in dark, damp and filthy windowless sheds, ideal conditions for the spread of disease. They are overworked and fed a poor diet, leaving them more susceptible to illness. We call upon the Government to take the focus away from the innocent badger and to concentrate on the real cause of the problem: poor animal husbandry.
